

Evaluation (Think aloud) Report

Product: The most common web app

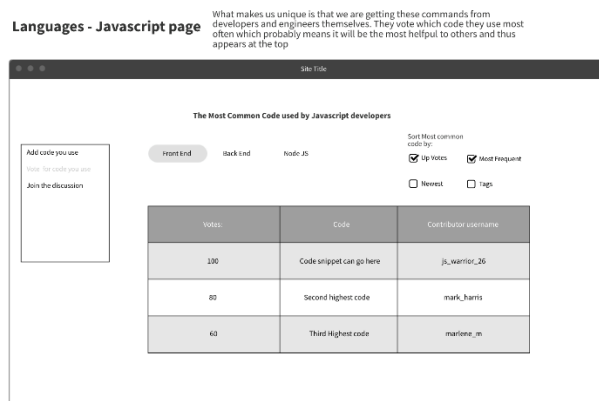

Version: Version 1

Number of test users: 2

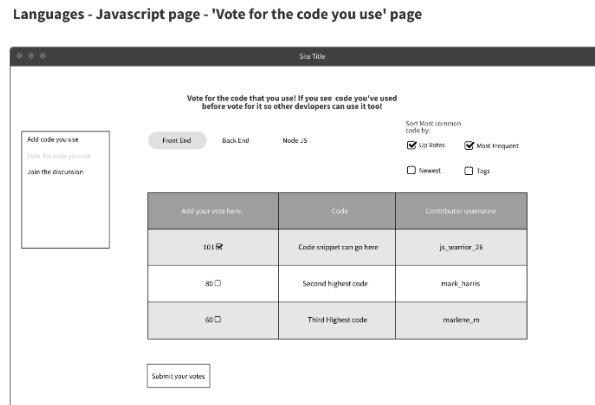

Problem:

1.

User cannot go back to Page A in Page B.

Page A

Page B

2.

The subpages (code upload page, forum page) do not show which main page (languages) it belongs to. When the user enters the relevant page, he cannot determine whether it belongs to JavaScript or Python.

3.

In the forum page, users cannot confirm whether they have successfully uploaded their thoughts (Questions).

Features that attract users:

1. The shared commands/code snippets.
2. The layout is simple and clear.
3. Discussion forum function.

User suggestion:

1. Build search function
2. Clearly define the interface for user and guest.
3. Each code snippet has a page that can describe the purpose of the code.

The average attractiveness:

A total of two users participated in this evaluation, with an average score of 3 (total score of 5).
